

PlayCheck®

Routine, Operational Inspection recording. Results at your fingertips

PlayCheck utilises mobile technology to replace the paper-based way of recording playground routine and operational inspections and their results. This is a quick and easy way to capture the required data using any mobile device.

PlayCheck benchmarks questions against NZS5828:2015 Playground Equipment and Surfacing Standards. Issues or high risk faults trigger instantaneous email alerts to ensure timely correction of vandalism, graffiti or failure of a playground equipment.

Best of all, the user can utilise the system to capture history to help develop asset replacement plans.

Key PlayCheck attributes:

- Internet-based, mobile technology
- Compatible with phone, tablet or laptop
- Cloud-based data storage
- Complete routine and operational reports
- Record comments and corrective actions
- Email alerts
- Unlimited number of users
- Records repairs and compiles data
- Report builder to capture history for asset replacement
